

## **Data Science Course: Machine Learning**

## **Mini-Project: Logistic Regression**

## **Learning Objective**

- Learn basic machine learning algorithms, including supervised Learning: logistic regressions.
- Practice applying machine learning algorithms to real data.

Criteria	Meets Expectations
Completion	The code runs successfully.
Process and understanding	The submission shows the correct solutions to all of the questions have been applied, as well as the correct visualizations.
	<ul> <li>The answers to all the questions are detailed, and demonstrate a good understanding of both the problem statement, as well as the underlying tools and methods.</li> </ul>
	The student has applied best ML modeling practices.
Presentation	<ul> <li>The project is delivered in a Jupyter notebook, uploaded to GitHub.</li> <li>The project doesn't contain any unnecessary printouts.</li> </ul>

Excellence: Publication quality visualizations are created. Certain methods are written from scratch (for example, for Cross Validation), the optional exercises are solved.
